## Chapter 1

p. 8, formula above Section 1.2: It should be $\mathrm{k}^{4} \quad \mathrm{k}^{2} \quad 2 \mathrm{k} \quad 1$ instead of $\mathrm{k}^{2} \quad 2 \mathrm{k} \quad 1$. However, the conclusion remains valid, since the correct quantity is not bounded, either.
Example 1.10, page 13: It should be

```
(x+y)=0:1219 106 = (x+y)(1+
```

p. 119, equations (3.17):

Letting $g(z)=1, g(z)=z, g(z)=z^{2}$, and $g(z)=z^{3}$, and setting $w_{i}=$ $2_{i}=\left(\begin{array}{ll}b & a\end{array}\right) \quad$, we obtain the following nonlinear system:
$Z_{1}$
$1 \mathrm{dz} \quad[(\mathrm{i})-369(=)] \mathrm{T} / / \mathrm{F} 119.962651 .748 .9370 T \mathrm{~d}[(\mathrm{w})] / \mathrm{F} / \mathrm{F} 106.9738 T \mathrm{f} 7.132-1.494 \mathrm{~T}$ O[(d 1
p. 400, item 1 of Example 7.5: It should be

$$
y_{j}=y_{0}(1+(=) \Pi J / / F 119.9626 T-2032160 T d h(0) \mathrm{J} J / F 89.9626 T 11.552160 T d)
$$

and

$$
G(x)=\left(g_{1}(x)_{1}(x\right.
$$
